

Amendments to the Specification:

Page 3, replace the last paragraph with the following amended paragraph:

As described above, a digital/analog broadcast, especially a sub-channel broadcast comparatively soon fluctuates in actual situation owing to temporary suspension in transmission, for example. Therefore, even when channel information is stored as a channel map beforehand for selection of a channel based thereon, the channel selection may fail to display ~~no~~ a broadcast program on the display resultantly. Also, a deficiency of a signal in PSIP (Program System Information Protocol) may cause a failure in channel selection.

Page 6, replace the paragraph spanning pages 6 and 7 with the following amended paragraph:

The following will describe a digital/analog broadcasting receiver having a channel selection device related to one embodiment of the invention with reference to the drawings. FIG. 1 is a block diagram of the digital/analog broadcasting receiver (hereinafter referred to as receiver). The receiver 1 is a set top box (STB) that receives at an antenna 10 an encoded radio-frequency (RF) digital/analog broadcasting signal originated from a TV broadcasting station to then display a list of the channel information which can be received by a display device 12 for displaying on a display ~~an~~ a video signal contained in the

broadcasting signal corresponding to operations for channel information display by the user by use of the body button or an input device 11 such as a later-described remote controller 30 shown in FIG. 2.
